Scriptura Fundamentals

Learning how to use all basic functions of the Scriptura product suite in just one day. At the end of the course, the attendee will be able to understand the Scriptura Designer, Scriptura Forms and Scriptura Document Flow.

Template Design Training

Learning how to use all basic functions of the Scriptura Template Designer. At the end of the course, the attendee will be able to design real life templates using XML files as data source. The training will be based entirely on step by step examples and exercises

Advanced Template Design Training

Learning how to use the less obvious functions in Scriptura Template Designer. During the course these functions will be used to fine-tune standard template designs.

At the end of the course, the attendee will be able to understand the concepts of these functions. Depending on their final goals, attendees should obtain more in-depth knowledge on certain subjects like XSLT, XPath and XSL-FO.

Server Administration Training

Learning how to manage your environment that has multiple Scriptura Servers and Scriptura Designers installed on various types of systems, using the Scriptura Administrator.

Document Flow Design Training

Learning how to use all basic functions of the Scriptura Document Flow Designer. At the end of the course, the attendee will be able to design real life document flows. The training will be based entirely on step by step examples and exercises.

Document Flow Extension Training

Learning how to use extend the basic functions of the Scriptura Document Flow Designer and Server to meet your business specific requirements. At the end of the course, the attendee will be able to extend real life document flows.

Forms Design Training

The purpose of this training is to learn people who have never designed interactive applications before, to design simple interactive forms.

Focus will be on understanding the different forms controls and how to use them. Training will be using step-by-step examples.

Forms Implementation Training

The purpose of this training is to learn programmers on how to design more advanced interactive forms. Focus will be on the different technologies that are available behind the covers of an XFORMS-implementation and which are needed to integrate the XFORMS solution into the business processes and applications. Only little attention will be paid to the XFORMS controls themselves.
